Professional Summary

Backend Developer with 7 years of experience designing and building scalable server-side systems across financial services, health tech, education, and enterprise sectors. Deep expertise in API design, database architecture, and system integration, with a proven record of delivering mission-critical backends for banking platforms, compliance systems, e-learning solutions, and real-time applications. Equally at home leading backend architecture on a product team or owning the full server-side stack as a freelancer, always focused on reliability, security, and clean, maintainable code.

Skills

- **Backend Languages:** C#, PHP, Python, JavaScript, TypeScript, C
- **Frameworks:** .Net, Laravel, Node.js, Nest.js, Express.js, Django
- **Databases:** MySQL, PostgreSQL, MsSQL, MongoDB, SQLite, Redis
- **Cloud & DevOps:** AWS, Docker, Firebase, Supabase, Cloudflare Workers, CI/CD Pipelines
- **APIs & Integration:** RESTful APIs, WebSockets, JWT Authentication, OAuth
- **Tools:** Git, GitHub, Postman, Swagger
- **Architecture:** Microservices, MVC Pattern, Clean Architecture
- **Others:** Security Best Practices, Performance Optimization, Agile Methodologies, AI Agents and MCP

Additional Skills:

- **Frontend Technologies:** React, Angular, Next.js, HTML5, CSS3, TailwindCSS, Bootstrap
- **Mobile Development:** Kotlin, React Native, Expo

Professional Experience

Backend Developer

Optimus Bank Limited, Lagos

January 2025 - Present

- Built and integrated an AI chatbot API powering in-app conversational banking on Optiverse.
- Developed Optipass, a visitor management system for Optimus Bank, handling full backend implementation for visitor tracking and access control.
- Integrated Google ML-Kit to implement facial liveness detection for biometric authorization of high-stakes user actions.
- Led development of the corporate internet banking platform as technical lead.
- Refactored core backend areas of the codebase to improve maintainability and scalability across the stack.

Freelance Backend Developer

2025 – Present

- Designed and built server-side systems for four client products — including REST APIs, database schemas, real-time infrastructure, serverless functions, and third-party payment integrations.
- Delivered production-grade backends for a health tracking platform, a salon booking ecosystem, a crypto analytics dashboard, and a real-time multiplayer game, working independently across the full server-side stack.

Full-stack Web Developer (Backend Focus)

Mitiget Assurance and Technology, Lagos

January 2024 - January 2025

- Designed and developed the complete backend architecture for an e-learning platform (Mitiget Learning Academy) using Laravel.
- Implemented comprehensive course management system with enrollment tracking, progress monitoring, and certification generation.
- Built sophisticated quiz engine with question randomization, time management, and automated scoring algorithms.
- Developed audit system for tracking user activities and maintaining compliance records.
- Created affiliate marketing system with commission calculation, referral tracking, and payment processing.
- Designed and implemented RESTful APIs consumed by Angular frontend applications.
- Optimized database performance through proper indexing and query optimization techniques.

Projects

Professional Projects

- **Optipass**

Visitor management system for Optimus Bank — full backend implementation covering visitor registration, host notifications, access control, and audit logging.

Technology: .Net, C#, MsSQL.

- **AI Chatbot API (Optiverse)**

Designed and integrated the conversational banking AI backend powering in-app assistance on the Optiverse banking platform.

Technology: REST API, AI Integration, WebSockets.

- **E-learning Platform Backend (MLA)**

Scalable backend architecture supporting course management, user authentication, quiz systems, and affiliate marketing.

Technology: Laravel, MySQL, JWT Authentication, Cron Jobs, Email Services, Angular.

[Live Preview](#)

- **Events Management Backend**

Backend system for event registration with admin panel and automated notification systems.

Technology: PHP, MySQL, Session Management, Email Integration.

[Live Preview](#)

Freelance Projects

- **Healthify** — Backend for a health tracking platform: REST API handling OCR-powered lab report analysis, daily reminder scheduling, weekly check-ins, and Google Health Connect data sync.

Technology: NestJS, PostgreSQL, Firebase.

- **The Gentle Touch** — Backend for a full salon ecosystem: API powering appointment booking, Yoco payment processing, real-time chat, product shopping, staff management, and service configuration.

Technology: NestJS, MongoDB, Redis, Firebase, Yoco.

- **Iris Crypto Engine** — Supabase backend powering a crypto intelligence dashboard with live market data, trading signals, portfolio tracking, and user watchlists.

Technology: Supabase, PostgreSQL.

- **Pictionary-Style Multiplayer Game** — Serverless backend built on Cloudflare Workers handling real-time

WebRTC signalling and canvas stream relay between the browser drawing interface and an Android TV client.

Technology: Cloudflare Workers, WebRTC, JavaScript.

Personal Projects

- **Subssum API Backend** *August 2024*

Telecommunications service backend with user management and service provisioning APIs.

Technology: Node.js, Express.js, MongoDB, JWT Authentication, RESTful API Design.

[GitHub Repository](#)

- **Clinic Management Backend** *October 2023 - December 2023*

Healthcare management system backend with patient records, appointment scheduling, and prescription management.

Technology: Laravel, MySQL, RESTful APIs, Role-based Authentication.

[GitHub Repository](#)

- **School Portal Backend** *December 2021 - April 2022*

Comprehensive school management system backend with multi-role authentication and academic record management.

Technology: PHP, MySQL, Session Management, File Upload Handling.

[GitHub Repository](#)

Database Design & Architecture

- **Relational (MySQL, PostgreSQL, MsSQL):** Designed normalized schemas across multiple production systems, including course hierarchy and affiliate tracking structures for MLA, a healthcare records schema with role-based access controls, and a visitor management schema with audit logging for Optipass. Applied indexing strategies and query optimization techniques that reduced response times by up to 50%.
- **Document (MongoDB):** Modelled flexible document schemas for high-write, schema-variable workloads, including a telecom service provisioning system and a real-time salon booking ecosystem with nested appointment, product, and staff data.
- **In-Memory (Redis):** Used Redis for session management, caching frequently accessed data, and powering real-time pub/sub messaging in The Gentle Touch salon platform to support live chat and instant booking updates.
- **Backend-as-a-Service (Supabase):** Leveraged Supabase's PostgreSQL backend and real-time subscriptions to power live market data feeds and user portfolio state in the Iris Crypto Engine dashboard.
- **Multi-database Architecture:** Designed and managed polyglot persistence across projects — selecting the right store per workload (relational for transactional integrity, document for flexibility, Redis for speed) within the same system.

Security & Performance

- Implemented JWT-based authentication and authorization systems
- Applied security best practices including input validation, SQL injection prevention, and data encryption
- Optimized database queries resulting in 50% improvement in response times

Education

B.Eng. in Civil Engineering — Second Class Upper (2:1)

University of Ilorin, Ilorin *November 2017 - October 2023*
